Portable Field Inspections

Intuitive workspace makes using ITPipes a snap!

Use ITPipes in the field to quickly create comprehensive inspections on a laptop, tablet or pc!

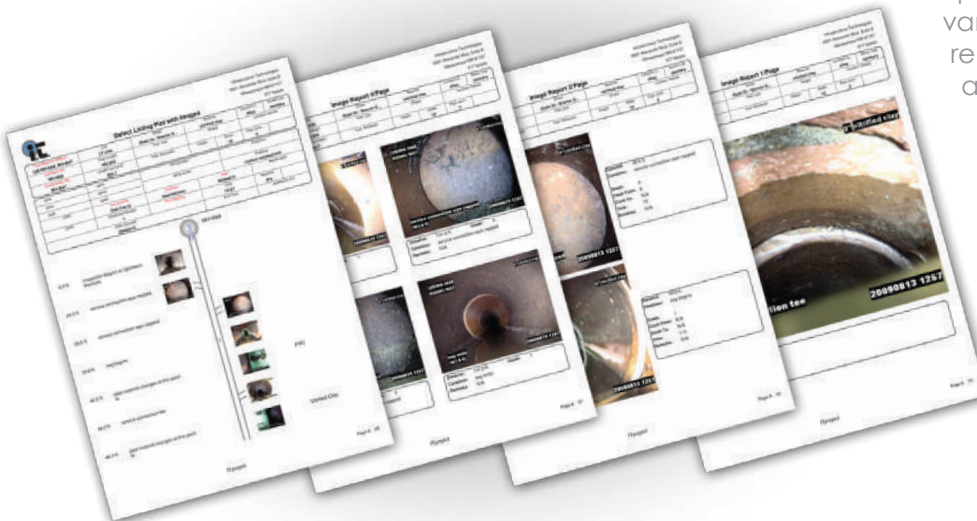

An ITPipes mobile package consists of everything you need for field data software, including:

- data collection
- reporting via hard copy or media
- integration to camera systems and other hardware
- on-site training
- unlimited deliverables distribution via ViewIT

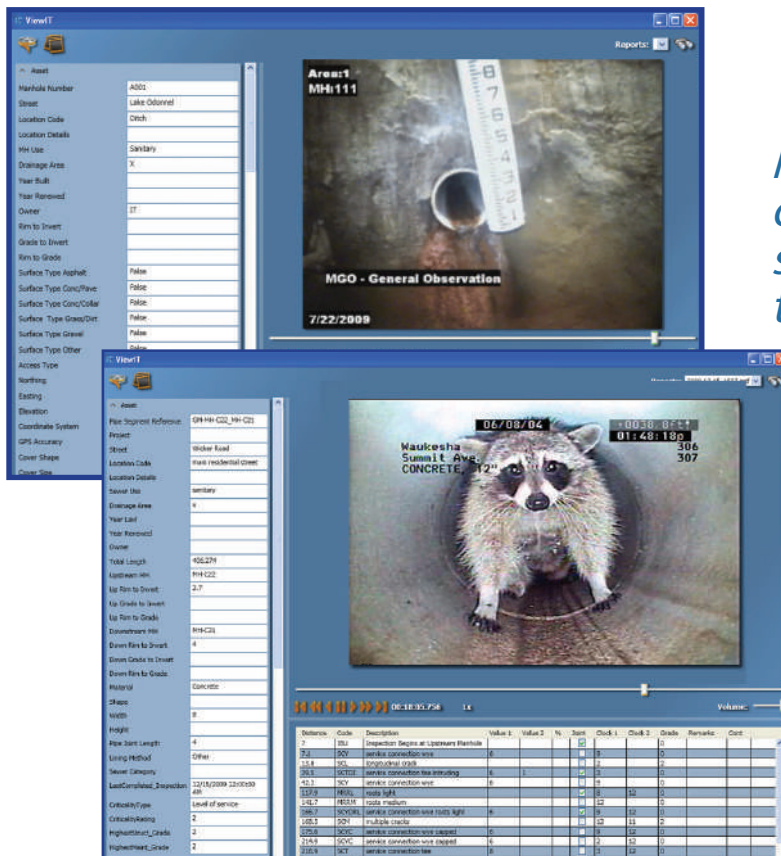

Here are some highlights:

- ITPipes is easy to learn, with HotButtons® for fast observation entry, quickprint options and simple sorting/filtering tools.
- Overlay text display to bring in camera information and integration to almost any OEM camera system.
- Recording controls eliminating extra clicks, automating video recording and simplifying reverse inspections.
- ITPipes stores unlimited historical inspections for each asset and can display in asset or inspection mode.
- Reports available include progress reporting and project management, various pipe graphics, spreadsheet reports, snapshot printouts, and additional options.
- Video can be captured direct in WMV, MPEG or other formats using standard off the shelf hardware or imported from digital files and other sources.

Integrate ITPipes with GIS to eliminate data entry and build or update maps!

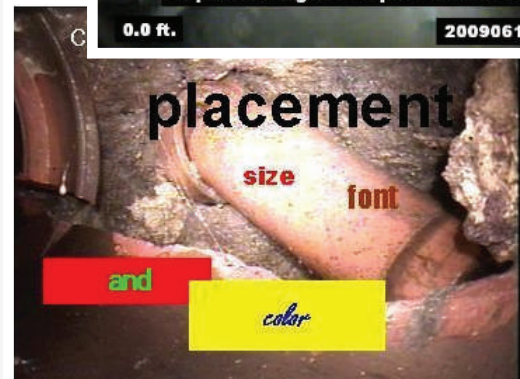

ViewIT is distributed with a single-click from ITpipes for impressive looking deliverables!

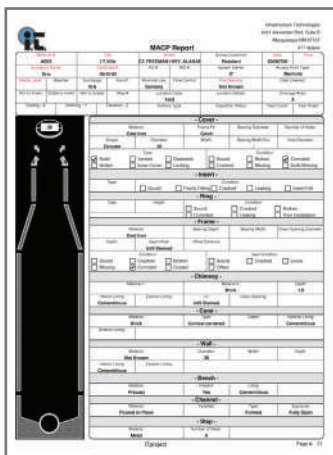

- ViewIT works off a portable hard drive and takes seconds to learn to use, making deliverables quick and easy.
- The free viewer app gives your client comprehensive inspection information; this includes all inspection detail, the ability to compare historical inspections side-by-side and PDF reports can be printed to hard copy as needed.
- Observations are color coded for quick review of severity levels and users can toggle through snapshots.

Modules for lateral, manhole, or other asset inspections use the same inspection and reporting tools-learn once for all options!

Digital overlay is flexible to meet text display demands.

CORE LICENSE

We start with the core and build a package for you.

Licensing & Modules

ASSETS/INSPECTIONS

pipes
manholes
laterals
wells/tanks
smoke & dye
grout reporting
viewIT*

INTEGRATION

Azteca Cityworks
Hansen Neztex
GBA Sewer
Cartegraph
IBM's Maximo
ESRI products
Cleanflow/RedZone (tm)

DIGITAL

video capture
overlay
speak*
post-editing

ANALYZE/MANAGE
