## The Best Solution For Wastewater Recycling

1. **Debris Tank:** Initial separation takes place as debris enters
2. **Ejector Plate:** Small clearances and passages allow liquids to pass to the bulkhead side, holding solids on the tailgate side
3. **Recycling Water Reservoir:** Controls water level on filter screen
4. **Stainless Steel Wedge Wire Filter:** Self-cleaning and oscillating
  - a. Constant low pressure spray bar uses recycled water to externally clean the screen
  - b. Intermittent high pressure spray bar uses fresh water to internally clean the screen
5. **Cyclone Separator:** Removes particles from the liquid
  - a. Includes an automatic continuous discharge of particles back into the debris body
6. **Y-Strainer with Stainless Steel Element:** Filters the liquid prior to the high pressure water pump
